

RE: Frames shipped with extra length – coordinating with doors

Frameworks Aluminum swing and sliding doors are designed with aesthetics in mind, and are shipped exact length and width per customer specification. **We do not recommend that the doors be cut down to size in the field.** Any field cutting of doors will void the Frameworks Manufacturing Warranty.

As such, **Frameworks will not ship doors together with frames unless the frames are ordered as exact length** (i.e. no "Scribe"). In cases where the frames are sent with additional length, Frameworks will not release the doors for production until field measurements are provided from the customer. The quoted lead time for doors starts at the point we are given final door measurements. Additional freight charges may apply if doors are shipped separately from frames.

The Frameworks Type 1, Type 2 and Type 6 (Slim Slider) product lines are designed primarily for interior use, and are especially suitable for the fast-paced Tenant Improvement market. There are a variety of ways that the frames can be ordered to suit different building conditions and customer preferences:

Option 1 – Frames are shipped exact length with no "scribe". Doors will be shipped separately unless requested that they ship with the frames.

Option 2 – Frames and *vertical* glazing members are shipped with extra 2" length for field cutting. This allows the installers to maintain a consistent sight line at the top of the door frames even when variations in the floor exist.

Option 3 – Frames and *all* glazing members are shipped with extra length for field cutting. This option allows installers to cut to fit in the field for both vertical and horizontal variations in rough openings.

Option 4 – Frames are sent with extra length for field cutting and all glazing material is sent in stock lengths. This allows installers to custom-configure as needed and quickly accommodate last minute changes or conditions on the jobsite.

Please note that for options 2 through 4, **field measurements must be provided after the frames are installed.** Doors will be scheduled for production after measurements are received. The quoted lead time starts after measurements are received.
